#### **ABSTRACT**

This study was aimed at investigating the householders' satisfaction with the waste collection of Tanyaburi Subdistrict Municipality, Tanyaburi District, Pathumthani Province. 320 household heads comprised the sample of the study. The study instrument was a set of self-administered questionnaires. The collected data was analyzed using descriptive statistical (percentage, mean, standard deviation and a t-test).

The data analysis has shed light on the facts specified below :

Holistically and separately considered, the household heads were highly satisfied with the waste collection of the municipality. The level of satisfaction order of strength were the following : the way of collecting waste material or garbage, transporting of waste material, and method of getting rid of waste material.

Comparative speaking, households with different backgrounds (education, incomes, occupations, and number of family members different in their satisfaction with the waste collection carried out by Tanyaburi Subdistrict Municipality.

**Key words:** satisfaction; waste collection
